

About me

I am a senior software engineer currently based in Brno, Czech republic.

My primary field is development of front-end for web applications. I focus especially on architecture of the code-base and quality of it's design. What differs me from others is my multi-disciplined approach to work.

Besides development, I have experience with graphic design, product analysis and project management. I like to explore new technologies and I'm always for a good team-work.
